

# DOLPHIN<sup>®</sup> 9500 mobile computer

*The HHP Dolphin<sup>®</sup> 9500 is the first of a new generation of mobile computers in the world-renowned Dolphin<sup>®</sup> family. It is sophisticated but easy to use; crammed with features but highly cost-effective; and is powered by HHP's superior Adaptus<sup>™</sup> imaging technology whilst providing a future-proof solution for optimal return on investment.*

## Why buy a Dolphin® 9500?

### **BECAUSE IT'S POWERFUL**

The 9500 is powered by HHP's revolutionary new Adaptus™ Technology; incorporates the latest Intel® X-Scale™ processor; and operates on a Microsoft® Windows® Pocket PC platform. These features help to maximise the speed, efficiency and usability of the unit, and enable data processing applications to be processed rapidly and accurately.

### **BECAUSE OF ITS PERFORMANCE**

HHP's Adaptus™ technology sets new levels of performance, accuracy and value. Its instant point-and-shoot capability can be used on virtually all symbologies, including 1D and 2D bar codes, PDF417, matrix and postal codes; and Optical Character Recognition (OCR) – as well as signature and image capture. It offers aggressive read rates and depths of field – even in difficult lighting conditions or with poor quality bar codes.

### **BECAUSE IT'S VERSATILE**

The new Dolphin® incorporates an industry-leading triple-radio design. This integrates WAN, LAN and PAN for real-time data collection, and enables the user to access the information at any time, and from anywhere. It is also equipped with the

latest GSM/GPRS technology, enabling users to collect and transmit data over the cellular telephone network.

### **BECAUSE IT'S EASY TO USE**

The 9500 is lightweight and compact. Its slim ergonomic design facilitates comfortable, single-handed data collection, making the unit ideal for prolonged use. The back-lit 1/4 VGA colour display ensures that the screen is easy to see in most lighting conditions.

### **BECAUSE IT'S DURABLE**

The new unit is powered by lithium-ion battery technology (which ensures a longer operation time), and is built to last. Although the Dolphin® 9500 is very lightweight, its magnesium alloy construction makes it the toughest product on the market. The model has an IP64 rating, underlining its ability to be used in harsh environments and demanding conditions.

### **BECAUSE IT'S FUTURE-PROOF**

With its open development platform, multi-function Adaptus™ technology and tough construction, the Dolphin® 9500

provides a future-proof data collection solution. It also supports industrial standard programming languages. These features ensure that businesses can maximise their return on investment both in the short term and also well into the future.

### **WHERE CAN IT BE USED?**

The power and versatility of the Dolphin® 9500 make it ideal for a wide range of applications in the manufacturing, industrial, retail, warehousing, transportation and distribution sectors. Typical applications include shipping and receiving; parcel delivery; track and trace; inventory control; and asset management.

**Choose a Dolphin® 9500 instead of a Symbol PDT 8000/8100/8800/9600; Intermec 700 Colour; Casio DT-X10; Pision Teklogix 7535; PSC Falcon 4410/4420; or Datalogic Viper.**
